

USER'S MANUAL

v2cigs

YOU MUST BE OF LEGAL SMOKING AGE TO USE ANY V2 CIGS PRODUCT

WARNING: V2 Cigs products are only intended for use by persons of legal smoking age who are current smokers. This product is not intended for nonsmokers, person under the legal smoking age, women who are pregnant or breastfeeding, or persons with or at risk of heart disease, high blood pressure, diabetes, or taking medicine for depression or asthma. Consult a physician if you experience nicotine misuse symptoms such as nausea, vomiting, dizziness, diarrhea, weakness and rapid heartbeat.

Keep out of the reach of children and pet as ingestion of small parts can present a choking hazard. Nicotine can be toxic if inhaled or ingested. Nicotine may cause irritation to eyes and skin. Wash immediately with soap and water upon contact. Seek medical advice in the case of dizziness, drowsiness, accident or if you feel unwell.

Our products do not treat, diagnose, or cure any disease, physical ailment, or condition. If you are allergic to nicotine or any combination of inhalants, if you are pregnant or breast-feeding, or if you have a heart condition, diabetes, high blood pressure or asthma, consult your physician before using V2 Cigs nicotine products.

Dispose of this material in a safe way; use appropriate containment to avoid environmental contamination.

V2 Cigs does not market this product as a smoking cessation device. For a detailed list of ingredients, go to: <http://www.v2cigs.com/Downloads.html>

Just like traditional tobacco cigarettes, V2 Electronic Cigarettes are not approved by the American FDA.

WARNING: This product contains nicotine a chemical known to the State of California to cause birth defects or other reproductive harm.

CONGRATULATIONS ON CHOOSING V2 CIGS!

To get the most out of your new V2 electronic cigarette, please read through this manual carefully.

INSTRUCTIONS: THE V2 ELECTRONIC CIGARETTE

The V2 electronic cigarette is a non-flammable electronic atomizing device designed exclusively to V2 Cigs quality standards to give you an experience similar to tobacco cigarettes. It utilizes advanced microelectronic technology to atomize a flavored liquid into an inhalable vapor that simulates smoke. V2 flavor cartridges contain liquid formulated from the highest quality pharmaceutical-grade nicotine and food-safe ingredients, and are available in a variety of flavors and nicotine strengths.

Note: V2 also offers flavored zero-nicotine cartridges.

BENEFITS OF THE V2 ELECTRONIC CIGARETTE:

- *Easy to Use.*

- *Incredible Vapor Production.*
- *High Quality Design.*
- *Tar Free, Carbon Monoxide Free, Ash free.*
- *Designed for social situations where you cannot use tobacco cigarettes.*
- *No embarrassing odors that linger in your home, vehicle or on clothing.*
- *Free of fire dangers.*
- *Better for the environment with no butts, smoke or ash.*
- *Saves Money, costing less than \$2 per cartridge (equal to 1 pack of tobacco cigarettes).*

KEY CHARACTERISTICS OF THE V2 ELECTRONIC CIGARETTE:

- Unlike smoke, the temperature of V2 nicotine vapor is similar to that of the human body.
- No environmental pollution. Smoke exhaled from your V2 is a gas dispersion of water vapor and flavoring, generated by the atomization of the flavor liquid.
- V2 cartridges contain the highest purity pharmaceutical grade nicotine.
- Your V2 electronic cigarette has a built in safety feature that will temporarily turn off the atomizer after 10 seconds of continuous atomization (i.e. a very long drag).

This feature is designed to prevent the user from overexposure to nicotine. When activated, the security system will trigger the LED light at the tip of the device to flash 3 times and the electronic cigarette will become temporarily inoperable.

CAUTION:

- Keep V2 batteries and cartridges and components out of children's reach.
- If you experience an adverse reaction, reduce the strength of your nicotine cartridge, or switch to "Zero" nicotine cartridges. If the problem persists, we recommend you discontinue the use of this product and see your physician.
- Avoid direct contact with the nicotine liquid contained in your atomized flavor cartridge. This liquid can cause irritation.
- Keep your V2 electronic cigarette and cartridges away from high temperature environments in use or storage.
- For a complete list of the ingredients in each flavor cartridge visit:
<http://www.v2cigs.com/Downloads.html>

THE V2 ELECTRONIC CIGARETTE

Your V2 electronic cigarette is comprised of two components: The battery and the disposable atomizer cartridge.

THE V2 ELECTRONIC CIGARETTE BATTERY

The main body of your V2 electronic cigarette is the battery. It is a 4.2 volt lithium-ion battery equipped with a computer chip that manages the operation of an attached disposable atomizer cartridge. Located at the tip of your battery, an LED indicator light signals the operational mode of your electronic cigarette. Battery output voltage can range from 3.7 to 4.2 volts, depending upon battery charge. V2 batteries are available in a variety of lengths. As a general rule, the longer the battery, the longer the battery life between recharges. V2 batteries are available in both automatic and manual switch varieties.

V2 DISPOSABLE ATOMIZED CARTRIDGES (V2 FLAVOR CARTRIDGES)

V2 flavor cartridges have a built-in atomizer containing microfiber mesh saturated with our proprietary V2 flavored liquid nicotine solution. V2 cartridges are disposable and available in four nicotine strengths: Full Strength (18 mg), Medium Strength (12mg), Light Strength (6mg), and Zero Nicotine (0mg). V2 flavor cartridges are designed to be roughly equivalent to one pack of 20 conventional cigarettes (400 mouthfuls of vapor).

Please note: actual results will vary depending upon your smoking style, lung capacity and the battery type used with your V2 atomized cartridge.

AUTOMATIC BATTERIES/ MANUAL BATTERIES: WHAT'S THE DIFFERENCE?

V2 automatic batteries are activated as you draw air through your V2 e-cigarette. Puffing will trigger an internal pressure switch and activate the atomization process. Your few puffs will warm the atomizer (priming), and optimal vapor is produced on the 3rd and subsequent puffs.

With the V2 manual battery, you must press and hold down a button for the duration of your puff. Vapor thickness is regulated through the use of the button. Optimal vapor is produced by pressing the button for 2 seconds prior to puffing and holding it down for the duration of the puff.

V2 CHARGERS & ADAPTERS

Your V2 USB Charger plugs into computers, most USB hubs and into any compatible V2 power adapter (i.e. Car Adapter, Wall Adapter). The USB charger light indicator will turn red when your battery is properly screwed in and charging. When the battery is fully charged, the light indicator will glow green. The input voltage range of V2 wall adapters (USA, EU, and UK version) is 100V-240V, 50/60HZ. The V2 auto adapter has an input range of DC12-24V. Please note: Adapters from brands other than V2 may not be compatible with the V2 batteries. V2 batteries that have been damaged through the use of incompatible chargers are not covered by our warranty and replacement policy.

USB CHARGER INSTRUCTIONS

- Screw your V2 battery into the USB charger.
- Insert the USB charger into a computer USB port or a V2 power adaptor (Wall or Car).
- The indicator light on the USB adaptor will glow red to indicate it's charging a battery.
- When a battery is fully charged, the indicator light on the USB charger will glow green.
- V2 batteries usually ship with a partial charge therefore first time charging should not exceed 2-3 hours. Subsequent charging should take no longer than 3-4 hours.

Important Note: Charging from a wall outlet will be faster than from a computer USB port.

HOW TO USE YOUR V2 ELECTRONIC CIGARETTE

- Unpack a V2 flavor cartridge, and remove all Stay-Fresh rubber caps. Depending on your cartridge flavor, there may be 2 OR 3 plastic caps to remove.

- Screw the cartridge securely onto the electronic battery. Your V2 electronic cigarette will be in stand-by mode as soon as you screw in the cartridge.
- **V2 automatic batteries:** the second your draw air from your V2 cigarette, the atomization process will be triggered and the light indicator at the tip of the V2 will light up. When you stop puffing, atomization will cease and the V2 will return to stand-by mode.
- **V2 manual batteries:** you must press and hold the battery button to trigger the atomization process. When the button is released, the unit will return to stand-by mode.

Note: it is recommended to hold the V2 electronic cigarette horizontally, avoiding tilting the tip upwards to prevent cartridge liquid from leaking out.

- If the LED indicator at the tip of your V2 starts flashing continuously and the vapor produced decreases, the battery must be recharged.
- After 14-16 deep puffs (comparable to smoking one conventional cigarette) we recommend you stop using the V2 for about 30 minutes before the next use.

V2 TROUBLESHOOTING

- If the LED indicator at the tip of your V2 battery flashes continuously (usually 15 times) and produces little or no vapor, you must recharge the battery.
- If your V2 cigarette produces little or no vapor and/or emits a slightly burnt taste, you must replace the flavor cartridge with a new one.
- When in use, the light indicator at the tip of your battery will glow. If the indicator does not glow, check the following:
 - Make sure the battery is charged
 - Ensure that the flavor cartridge's Stay Fresh caps have been removed. V2 cartridges come with rubber caps to preserve freshness which must be removed prior to use.
 - Verify that the cartridge in place is no older than 6 months.
 - When using a V2 cigarette with a manual battery, make sure to hold the button down to produce vapor. Failure to press on the button while inhaling may cause the cartridge's liquid to leak and come into contact with your mouth, potentially causing irritation.
 - When using a V2 cigarette with an automatic battery, "prime" new cartridges by taking at least two long, deep puffs to ensure the cartridge produces optimal vapor with subsequent puffs.

- If the battery of your V2 cigarette is fully charged but does not produce vapor after a new cartridge has been installed, try another new cartridge. Although rare, cartridge defects are possible.

After trying multiple cartridges, if your V2 unit still does not work, please contact V2 customer service for technical assistance.

Should you have any other questions or concerns, contact the Vapor Geeks via chat or phone. They are V2 experts and happy to assist you in your needs.
